Glossy

SIZE OPTIONS

Custom Size

BUILT FOR BACKLIGHT

Translucent face diffuses light evenly through the printed graphic.

GLOSSY, VIVID COLOR

Top-coated film for sharp, saturated illuminated graphics.

INDOOR & OUTDOOR

Suited to light boxes, illuminated signs and window displays.

Application, Handling & Care

ORAFOL produces several clear and translucent ORAJET films for window and back-lit work. The guidance below covers printing, applying and caring for a translucent illumination film; the exact ORAJET SKU determines the rated durability and adhesive system.

PRODUCT

Material	Translucent illumination print vinyl	Finish	Gloss
Print Sides	Single-sided	Environment	Indoor & Outdoor
Size	Custom	Options	Contour cut

PRINTING & FINISHING

- Print with solvent, eco-solvent, latex or UV curable inks per your ORAJET SKU
- Allow inks to fully cure before laminating or cutting the graphic
- An ORAGUARD® over-laminate adds UV and abrasion protection for outdoor and illuminated use

SURFACE & APPLICATION

- Apply to clean, fully cured glass or a rigid illuminated substrate (light box or sign face)
- Squeegee from the center outward to remove air; press all edges firmly
- Let freshly painted or lacquered surfaces cure before application; test adhesion on the target surface first

CARE

- Clean with a mild, non-abrasive cleaner; avoid harsh solvents
- For back-lit faces, keep both sides free of dust to preserve even light diffusion
